TITLE	How Many Kentuckians: Population Forecasts, 1985-2020. The 1988 Edition.
INSTITUTION	Louisville Univ., Ky. Urban Studies Center.
SPONS AGENCY	Kentucky State Office for Policy and Management, Frankfort.
PUB DATE	88
NOTE	173p.; For 1986 edition, see ED 274 480.
AVAILABLE FROM	Urban Studies Center, Attn: Publications, University of Louisville, Louisville, KY 40292 ($10.00).
PUB TYPE	Statistical Data (110)
EDRS PRICE	MF01 Plus Postage. PC Not Available from EDRS.
DESCRIPTORS	Age Groups; Birth Rate; Cohort Analysis; *Demography; *Futures (of Society); Migration; Older Adults; *Population Distribution; Population Education; Population Growth; *Population Trends; Sex; *Social Indicators; Social Science Research; Trend Analysis
IDENTIFIERS	*Kentucky

ABSTRACT

This report contains the latest official population forecasts for Kentucky. Population projections are revised periodically, based on the emergence of recent demographic trends that are inconsistent with assumptions used in earlier forecasts or the revelation of major developments that would impact future population growth. Recent trends are analyzed through annual population estimates derived from recorded births, deaths, and indicators of migration, taking into account changes in the fertility and migration components of the projections model. The 1980 census counts, the 1985 estimate, and projections for the years 1990, 1995, 2000, 2010, and 2020 are presented for the state, its 15 area development districts, its 7 metropolitan statistical areas, and its 120 counties. Tables present detailed population projections by gender and five-year age groups through 85 years and over. Age summaries are also presented for the population 0-18 years and 65 years and over. A cohort-component model projects the household population and the group quarters population aged 65 years and over in each county. Annual estimates 1981-1986 and annual projections for 1986-2020 are available by single year of age and two racial groups, white and nonwhite. The projections anticipate slow growth in Kentucky for the next few decades, with 21 counties expected to lose population. The state's non-metropolitan areas are expected to grow by 7.5 percent, whereas the metropolitan areas are expected to experience only a 4.6 percent increase. The state's number of elderly people is expected to increase, comprising 13.7 percent of the total population by 1995. This report also details its forecast methodology and includes locator maps. ACKNOWLEDGMENTS

This research report is produced by the Population Studies Program of the Urban Studies Center and is sponsored by the Commonwealth of Kentucky through the State Office for Policy and Management. Michael Price is the Program Director and Tom Sawyer is the Project Manager. Several Center staff members deserve special thanks. Their efforts helped make this report possible. They are Betsy Jones, Lisa Johnson, Charles Mencer, Angela Kapfhammer, Sharon Mader, and Nancy Roseberry.

KENTUCKY POPULATION PROJECTION SERIES

This report contains the latest official population forecasts for the Commonwealth of Kentucky. Population projections are revised periodically based on the emergence of recent demographic trends that are inconsistent with assumptions used in earlier forecasts and/or the revelation of major developments that would impact future population growth. Recent trends are analyzed through annual population estimates derived by methodologies based on recorded births, deaths, and indicators of migration (U.S. Department of Commerce, 1988).

These forecasts take into account changes in the fertility and migration components of the projections model. A review of available vital statistics data for the period 1980-1986 revealed that the projected fertility rates were not consistent with the actual number of births. This resulted in the lowering of the fertility rates in 57 counties. In only four counties, Fayette, Rowan, Scott, and Wolfe, were the fertility rates increased. A similar review of the migration component highlighted differences between the assumed migration rates and the actual net migration that has occurred between 1980 and 1986. As a result, migration rates were adjusted to reflect the 1980-1986 trend.

The 1980 census counts, the 1985 estimate, and the projections for the years 1990, 1995, 2000, 2010, and 2020 are presented for the state, its 15 area development districts (ADDs), its 7 metropolitan statistical areas (MSAs), and its 120 counties. Projection summaries are shown for the state and ADDs in Table 1, and for the state and MSAs in Table 2. The 1981-1986 annual estimate series is summarized in Table 3 and the projection summary for the state and counties in Table 4. In addition, county summaries are shown for projected median ages in Table 5, and for projected dependency ratios in Table 6. Following a description of the methodology, detailed population projections are presented by gender and five-year age groups through 85 years and over. Age summaries are also presented for the population 0-18 years, and 65 years and over.

Annual estimates, 1981-1986, and annual projections, 1986-2020, are available by single year of age and two racial groups, white and nonwhite. To obtain customized estimates and/or projections in printout or machine-readable form, contact the State Data Center, Urban Studies Center, University of Louisville, Louisville, Kentucky 40292, or telephone (502) 588-7990.

HIGHLIGHTS AND SUMMARY TABLES

- The latest population projections for the state of Kentucky anticipate slow growth over the next few decades. Based on the recent demographic trends that have occurred from 1980 to 1986, the population of the Commonwealth is expected to increase by 5.1 percent during the 1980s, reaching 3,847,018 in 1990. The rate of growth for the 1990s is forecast to be 5.4 percent.
- From 1985 to 1995, while the state's growth rate is 6.2 percent, 33 counties are expected to grow by more than 10.0 percent.
- County growth is expected to be greatest in Scott (24.4%), Oldham (24.3%), Warren (22.7%), Anderson (19.8%), and Boone (19.1%) counties. Fayette is expected to experience a gain of 10.2 percent.
- Counties with the largest anticipated absolute gain are Fayette (21,966), Warren (18,072), and Hardin (13,050).
- Twenty-one of the state's 120 counties are projected to lose population during this time. Those expected to lose more than 3.0 percent are Fulton (9.3%), Todd (8.5%), Hickman (7.1%), Boyd (4.4%), Washington (3.5%), and Robertson (3.0%). Jefferson County is forecast to lose 0.4 percent.
- Counties with the largest absolute loss will likely be Jefferson (2,947), Boyd (2,369), and McCracken (1,081).
- The state's non-metropolitan areas are expected to grow by 7.5 percent (152,992 persons), whereas the metropolitan areas are expected to experience only a 4.6 percent increase (78,113 persons).
- The state's population will continue to "gray" as the number of elderly persons increase. In 1985, 11.8 percent of Kentuckians were 65 years old and over. By 1995, the number of elderly is expected to be 542,059 and will comprise 13.7 percent of the population.
- The elderly population is projected to grow by more than 50.0 percent in 3 counties: Boone (73.0%), Bullitt (65.1%), and Oldham (50.5%). Another 24 counties are expected to experience a growth in the elderly population of more than 25.0 percent.
- Only 7 counties are forecast to lose elderly population. For the same time period, the population 18 years old and under will decrease by 56,015 persons (5.2%), dropping its share of the state's total population from 29.1 percent to 26.0 percent.
- The state's median age is expected to increase from 31.7 in 1985 to 34.4 in 1995 and 41.9 in 2020.
- The state's age dependency ratio is expected to decline from 74.6 to 63.1 from 1980 to 2000, and increase to 68.0 in 2020. The age dependency ratio is the ratio of the combined young population (00-18) and the elderly population (65+) to the population of "working age" (19-64), multiplied by 100.
- The decline in the age dependency ratio from 1980 to 2000 is due to the relative decline in the number of children and the relatively large increase in the working aged population. The increase in dependency ratio from 2000 to 2020 results from the expected increase in the elderly population during that time.
- The old age dependency ratio continues to increase throughout the forty year period. The ratio increases from 19.5 in 1980 to 22.9 in 2000 and to 32.4 in 2020.

*Total Age Ratio = (Population 00-18 + population 65+)/(Population 19-64) x 100
Young Age Ratio = (Population 00-18)/(Population 19-64) x 100
Old Age Ratio = (Population 65+)/(Population 19-64) x 100

METHODOLOGY

A cohort-component model is used to project the household population and the group quarters population aged 65 years and over in each county. The group quarters population aged under 65 years is held constant from the base year and added to the population projected by the model to obtain the total projected population. The model produces annual midyear projections by using: (1) survival rates to adjust for annual mortality; (2) age-specific fertility rates for the survived female population; and (3) net migration rates to adjust the population derived through "natural change." These projections are based from July 1, 1985 estimates produced by the U.S. Bureau of the Census and the Urban Studies Center.

Projected survival rates are the most recent published by the Census Bureau for the nation (U.S. Department of Commerce, 1983). Mortality in Kentucky historically has been higher than national averages, particularly in the case of infant deaths. Recently, however, there has been a convergence between national and state death rates. It is assumed that survivorship in the state will increase according to national projections. Table 7 presents a summary of survival rates by age, gender, and race as used in the model. These rates are based on projections of population in five-year age groups, assuming no net migration, but they reflect projected survival rates by single year of age and the age distribution within each age group. Rates are increased annually until the year 2000, and then held constant through 2020.

Age-specific fertility rates are divided into five categories as shown in Table 8. They are low white fertility, moderate white fertility, high white fertility, nonwhite fertility, and extremely high fertility. Initial levels of white fertility are determined by historical patterns shown for counties in relation to national patterns. Adjustments are then made to the levels of fertility based on actual number of births during the 1980-1986 period. Forty-four of the 120 counties have birth rates for whites consistently above national rates. White fertility is moderate, consistent with national rates, in 37 counties and below national birth rates in another 37 counties. Nonwhite fertility is higher than white fertility, particularly for females under 25 years of age. In Christian and Hardin counties fertility is extremely high for all races, apparently associated with the location of major military installations. Counties are presented by fertility level in Table 9.

Net migration rates for counties are specific to the populations both under and over 65 years of age. Although migration patterns at the county level fluctuate considerably in the short term and therefore are difficult to project, migration assumptions used in this series are based on the annual net migration rates from the 1980-1985 population estimates (U.S. Department of Commerce, 1988). In almost all counties, the average annual migration rates are specific to the populations under 65 years old and over 65 years old, as shown in Table 10, and are used from 1985 to 1990. After 1990,

migration rates are converged halfway toward zero net migration over the next ten years, and finally held constant from 2000 through 2020.

Christian, Hardin, and Scott counties use migration rates derived differently than those for other counties. The migration rates for Scott County are derived from the demographic impact analysis of the Toyota plant (Koebel et al., 1986). For Christian and Hardin counties, migration rates (see Table 11) are specific to a wider number of age groups due to the presence in those counties of major military bases.

Table 9

Counties by Level of Fertility

Low white fertility

Adair	Calloway	Greenup	Marshall	Russell
Anderson	Clinton	Hart	Meade	Taylor
Ballard	Edmonson	Hickman	Montgomery	Trigg
Barren	Elliot	Jefferson	Oldham	Warren
Bath	Franklin	Larue	Owen	Woodford
Boyd	Gallatin	Livingston	Pike	
Boyle	Garrard	Lyon	Pulaski	
Bullitt	Green	Madison	Robertson	

Moderate white fertility

Bourbon	Floyd	Lewis	Metcalfe	Simpson
Bracken	Graves	Lincoln	Muhlenberg	Spencer
Breckinridge	Grayson	Logan	Nicholas	Trimble
Butler	Hancock	McCracken	Ohio	Washington
Clark	Henry	McLean	Owsley	Wayne
Crittenden	Jackson	Mason	Rockcastle	
Fayette	Jessamine	Menifee	Rowan	
Fleming	Leslie	Mercer	Shelby	

High white fertility

Allen	Casey	Henderson	Letcher	Perry
Bell	Clay	Hopkins	McCreary	Powell
Boone	Cumberland	Johnson	Magoffin	Scott
Breathitt	Daviess	Kenton	Marion	Todd
Caldwell	Estill	Knott	Martin	Union
Campbell	Fulton	Knox	Monroe	Webster
Carlisle	Grant	Laurel	Morgan	Whitley
Carroll	Harlan	Lawrence	Nelson	Wolfe
Carter	Harrison	Lee	Pendleton	

Extremely high fertility

Christian
Hardin
